

CHAPTER V

CONCLUSIONS AND SUGGESTIONS

A. Conclusions

This research was conducted on students in class 8 B, SMP Negeri 02 Sungai Kakap, Kubu Raya Regency in the 2023/2024 academic year. This research aimed to improve students' vocabulary mastery using flashcard media. Based on the findings obtained by the writer when conducting research, it can be concluded that:

1. The application of flashcard media can increase students' vocabulary mastery. Because flashcard media has attractive data for students because it has colorful pictures, and has an understanding of English and translation, so it is easy for them to learn and understand this understanding. Students are also taught to pronounce vocabulary aloud, making it easier for students to remember the vocabulary. And students performed better when tested on vocabulary aspects, namely meaning, word use, spelling and pronunciation in tests given by the writer and they were able to answer the test questions given and they could also pronounce English vocabulary well and correctly.
2. In this research, flashcard media can be said to increase students' vocabulary mastery, as can be seen from the quantitative data. The results of the first cycle of tests can be said to be low or unsatisfactory because all students (32 students) received the not achieved category, fortunately in the second cycle the results of the student tests showed good improvement, and can be seen from the test results given by the writer to grade 8 students. B, namely 12 students got the good category, 8 students got the achieved category, 0 students got the very good category, and 13 students got the not achieved category. So it can be concluded that there was an increase in students' test scores from cycle 1 to cycle 2.

B. Suggestions

The writer would like to provide several suggestions which he hopes will be useful in applying or implementing flashcard media in the learning process to improve students' vocabulary mastery, to teachers, students and other researchers for further study, namely:

1. Teachers must implement flashcard media properly and correctly, then teachers must approach themselves to the students so that the students enjoy learning and will pay more attention to the teacher when they feel familiar with the teacher.
2. Students must follow each learning step using flashcard media well, because it can help students understand and memorize vocabulary when they focus on learning, and it will also increase the range of students' vocabulary.
3. The writer hopes that other researchers can use the results of this research as a reference for future researchers, and the writer hopes that this research can provide brief knowledge to other researchers to carry out similar future research in different schools.
4. For other research later, which uses the same title, it is recommended to include an image in each questions for the test.
