

CHAPTER V

CONCLUSIONS AND SUGGESTIONS

A. CONCLUSIONS

Based on the research findings in the previous chapter, this research succeeded in improving students' reading skills by using Canva media. After conducting research at SMAN 1 Sungai Kakap, especially in class XI IPA 3, the researcher concluded that using Canva media could improve students' reading skills. This can be seen from all the data and tests collected by the researcher to compare before and after using Canva media in the learning process in Cycle I and Cycle II. The researcher found a significant increase from each Cycle, where there was a difference in the tests in Cycle I and Cycle II. Where in the Cycle I the mean score of students was 66.96 while in the Cycle II the mean score of students was 74.46. The test in Cycle II saw more improvement compared to the test in Cycle I.

It can be concluded that the use of Canva media can improve students' reading skills and can be the right strategic solution to help overcome problems in improving students' reading skills in the process of learning English in class. Thus, the action hypothesis in this research can be accepted.

B. SUGGESTIONS

Based on the findings in this research, the researcher wants to provide some suggestions or input related to teachers, students, schools, and also other researchers. These suggestions are:

1. For the teacher

In providing and delivering material, teachers are expected to be creative in using learning techniques so that students can enjoy and experience a pleasant learning process. One of them is by using Canva media as a learning support medium. So that learning can run well, and also students' ability to master English has increased.

2. For the students

Students are expected to be more active and enthusiastic in learning to improve their mastery of English so that they can improve not only their reading skills but also their listening, speaking, and writing skills.

3. For school

It is hoped that schools can help encourage students to be more enthusiastic and motivated to improve the quality of their learning, especially learning English, by providing facilities and media that can support the learning process to take place more effectively.

4. For the other researchers

Other researchers are expected to be able to use the results of this research as a reference and guideline for conducting further research regarding the use of Canva media as a learning support medium. However, the researchers suggest being more creative in applying Canva media in the teaching-learning process.
