CHAPTER V
CONCLUSION AND SUGGESTION

A. CONCLUSION

The objective of this study was to describe student difficulties in reading comperhension in English.this reseacher involved 30 student who SMP 2 Teluk Keramat. To obtain data, the reseacher used a questionnaire provided is a question (distributed to all 31 student) and student document (conducted 30 student from student document). The questionnaire consist of 10 item categorized into 4 types of reading difficultiesn namely understanding and deriving meaning from teks, identfying and understand vocabulary, makking inferences, and understanding the context of word in the text.

Based on the main findings from questionnaires and student documents, vocabulary mastery is the difficulty most often faced by students. Researchers also found that students experienced difficulty understanding and deriving meaning from texts. Although understanding the context of words in the text is the difficulty most rarely faced by students based on student documents, this can cause three other types of difficulties to occur for students when reading English texts. A study conducted by Nurjanah (2018) suggests that this problem may be related to a lack of exposure to English, poor reading habits, and students' lack of interest in reading longer texts in English.

B. SUGGESTION

Based on the conclusition of this study, the reseacher would like to give some suggestion that might b useful in applying in SMP 2 Teluk Keramat to improve the student reading comprehension to the teacher, the student and the other reseacher for futher study, such as :

1. Student are advised to learn more about reading comprehension , especially in the aspect that are considered the most difficult, and the practic working on reading question in their spare time to that when they find reading comperhension question, student understand and find it easier to work on them.

2. Teacher and advised to develop appropriate leaarning strategies, making at easier for student to improve their understanding

3. Reseacher, this research is expect to be able to provide illustrative ideaa to future reseachers, if they want to research on reading difficulties.
